

Your competent and reliable partner for IT solutions around SAP

We have provided technical support for numerous projects involving the introduction and further development of SAP. We are happy to make the experience we have gained available to your company. Our range of services extends from the design and planning of the architecture to the implementation of customised solutions for your processes.

GS1 Barcode Generator as SAP Add-On

➔ SAP add-on for all barcode symbologies

- Ready for use within 1 hour
- Test examples included
- Adobe Forms Print form
- Test report for direct display on the screen

Europe IT Consulting GmbH offers its own solution for generating and displaying different barcode types in SAP for all three SAP form technologies. Among others:

- GS1 Datamatrix Barcode
- GS1 Code 128
- Pharmacode
- QR Code
- Code39
- ..

The solution is a fully integrated SAP solution, so no external software or hardware is required.

Our tool generates the barcode in BMP image format. This means that they can be integrated relatively easily into any form type (Sapscrip, Smartforms and Adobe Interactive Forms / Adobe Livecycle Designer).

The new Adobe Forms form technology is inherently capable of handling many barcode types. Unfortunately, the option to generate a GS1 Datamatrix and some other barcode types is still missing.

With our tool, this is no longer a problem.

Our services:

- Import of the GS1 barcode generator into your system
- Adaptation of your print programmes to generate the HRI
- Integration of the GS1 barcode generator in the print programme / form interface Adaptation of the forms

If you have any questions, please do not hesitate to contact us. We will be happy to help you.
